

**FIRST-LINE SUPPLIER OF HYDRAULIC
COMPONENTS AND DRIVES
FOR INDUSTRY AND AUTOMOTIVE**

Who we are

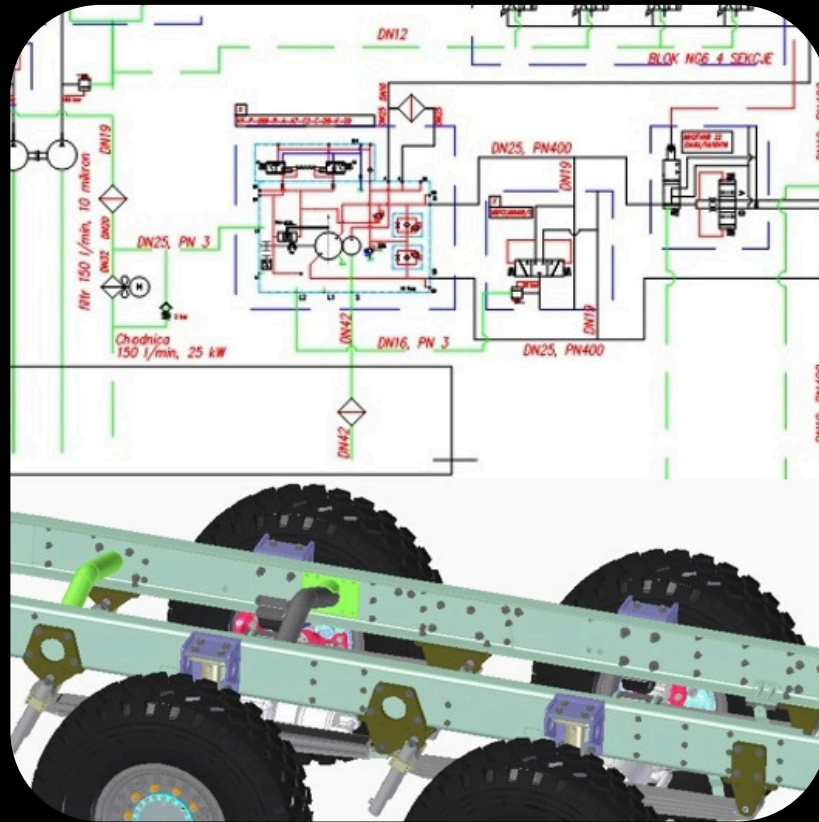

Since our beginning in 2007, we have been a leading supplier of complete hydraulic systems that are designed with our customers' individual needs in mind.

Our specialization includes designing, prototyping and delivering dedicated hydraulic systems tailored to specific applications.

With many years of experience in research and development and numerous completed projects, we are ready to step into the future, confident that our team knows virtually no limits when it comes to creating innovative solutions.

Our company deals with the implementation of advanced projects, starting from the conceptual phase, through the design stage, building prototypes, participating in tests and research, up to on-time serial deliveries.

What do we offer?

1 Projects

Your system designed according to your requirements using the latest components.

2 Prototyping

Check the design before you commit. Let your decision be based on engineering knowledge.

3 Production

Systems manufactured under supervision of Marigold quality. Guarantee of high quality standards in line with your expectations.

4 Delivery

Organizational and logistic matters are on our side. On request, we brand deliveries according to the guidelines with your spare parts sales department in mind.

5 Launch

The participation of our technical department in support of the launch of new systems is standard for Marigold implementations.

6 Tests

Our participation in tests in real conditions is obvious. It is a great test for the system as well as another 'injection of knowledge' for the implementation team.

and even more

7 Service

The offer includes warranty and post-warranty service. Full technical support is provided throughout the entire period of system operation.

Hydraulic Systems Technology

8 Storage

In accordance with the design guidelines and the concluded agreement, it is possible to store specified components or entire systems.

9 Spare parts

Many projects are burdened with requirements for securing parts over a period of many years. We are familiar with these needs and take them into account in each project at the design stage.

www.marigold.pl

No design restrictions

We cooperate with every major manufacturer of hydraulic components to create the best possible technical solutions.

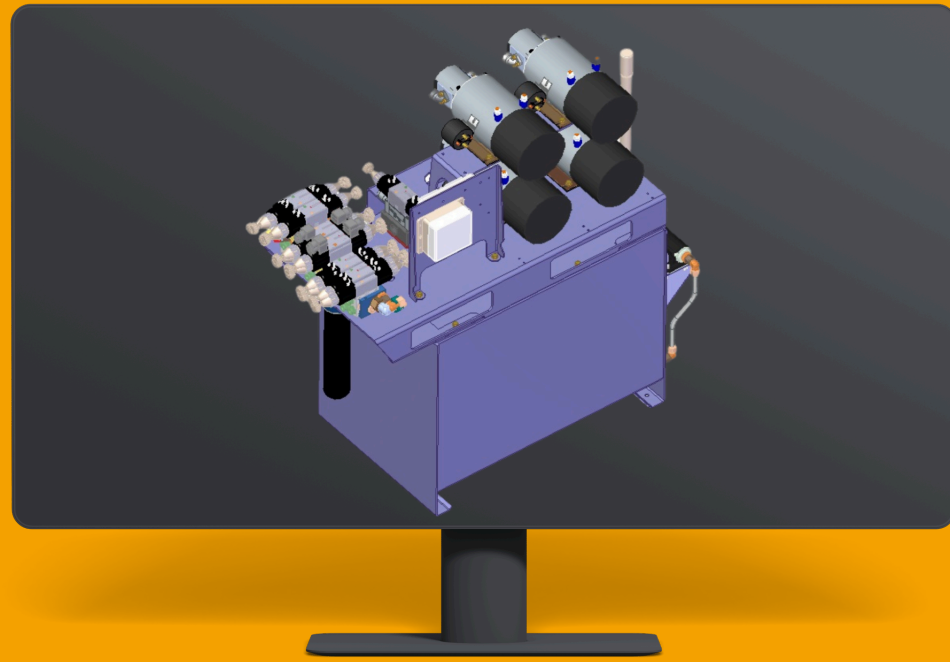

Official representative of the company

We offer a full range of components and engineering solutions from ATOS Group, a global supplier to many industrial sectors.

Support for R&D teams and Engineers

For professionals in their field

Tailor-made system design including:

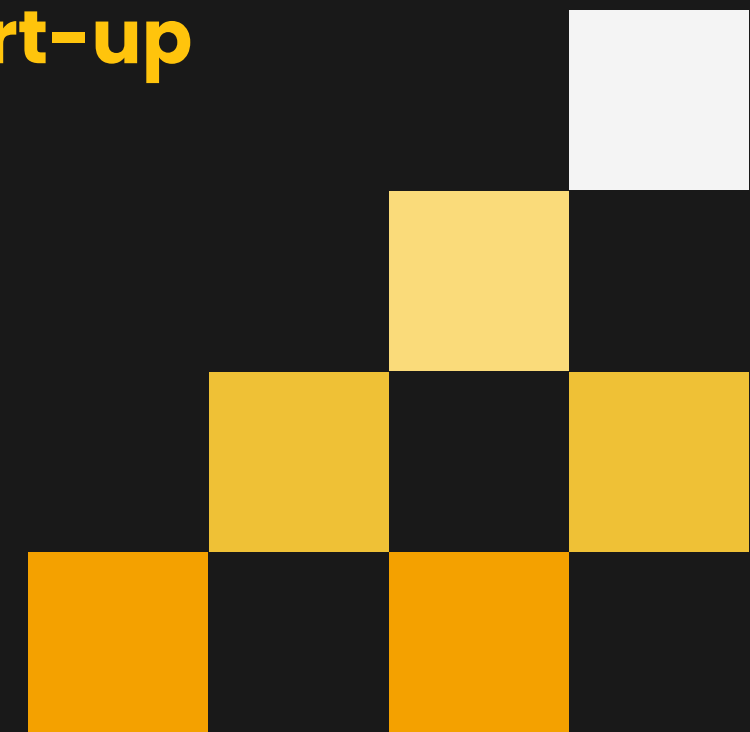

- ➔ 3D CAD documentation
- ➔ 2D design documentation
- ➔ Dedicated control software
- ➔ Technical support at every stage of work
- ➔ Research and testing

Our sample projects

- ✓ **Design of a belt braking system for a coal conveyor belt on a new unit at ENEA Kozenice**
- ✓ **Design and implementation of the hydrostatic drive of the road wheels and the drive of the propellers, the steering system, the drive of the amphibian fans with the control system at AMZ Kutno**
- ✓ **Design and implementation of hydraulic drives with a control system for the stern ramp, jetski garage, and cockpit hatch of an 80-foot yacht at Sunreef Yachts**
- ✓ **Design of hydraulic and lubrication systems, and supervision over the start-up of a chain excavator in the Turów open-pit mine**
- ✓ **Design and implementation of belt braking systems at FAMUR S.A.**

We look to the future

our ongoing R&D projects

Hydraulic suspension with air-hydraulic struts for a 4x4 vehicle

Manufacturing technology for multifunctional, integrally armored container systems with increased resistance to explosions, equipped with an autonomous unloading and leveling system

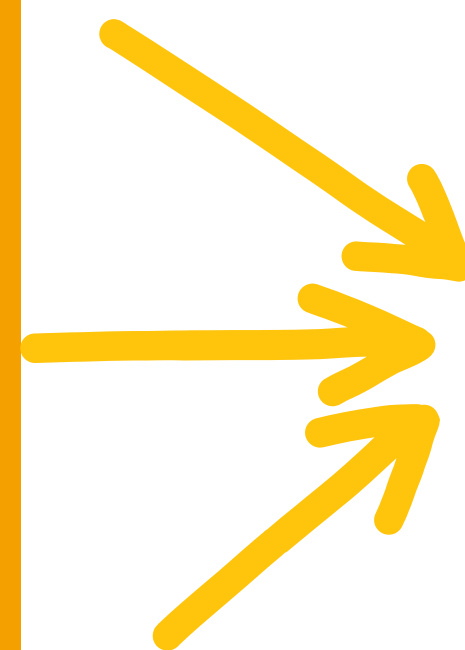

Application of innovative composite materials in the construction of hydraulic drive systems used in environmentally aggressive areas.

Who are our clients?

Our clients are manufacturers from the following sectors:

- **Automotive** including military vehicles and specialist bodies
- **Marine** in the production of luxury yachts and boats
- **Industry & Mining** in the field of hydraulic drive systems
- **Power Engineering** in the field of hydraulic drive systems
